

# **GENERAL RENTAL SALES & SERVICE**

## **Frozen Drink Machine**

### **Instructions & Guidelines For Use**

#### **Bunn Unit**

1. The machine is very heavy. Be sure to place it on a very sturdy surface.
2. Plug the unit directly into an outlet. **Do not** use an extension cord or power strip. The unit draws a lot of electricity. Be sure another major appliance is not on the same line.
3. Before adding the drink mix to the containers, **be sure they are tightly snapped into place**. If they are not, the liquid will come out.
4. If using outside on a hot, humid day- be aware that it could prevent the mix from freezing completely. Do not leave machine outside in the rain.
5. If adding alcohol to the mix, be aware that this could prevent the mix from freezing completely.
6. All the controls for the machine are in the drawer on the front of the machine. All buttons are clearly marked, with separate controls for the right and left containers.
7. Turn machine on. Be sure the “day/night” button is pushed into place. The “day” control will produce ice. The “night” control will allow the mix to stay cold but not ice up.
8. Fill the containers with the mix. Note the “min” & “max” levels on the side of the container. Each side will hold about 3.5 gallons of mix. As the level goes down, if you like, add more mix a little at a time.
9. After the unit is filled, turn on the auger for each side.
10. Allow about 1.5 hours to completely freeze the mix.
11. After your event, empty the containers. Be sure they are still snapped into place. Fill each container with water and let the auger rotate to clean the mix from the machine. Empty by using the front handles. Repeat if needed. Wipe any access mix and water from the containers.
12. If using the gallon container of mix, add 4 gallons of water.  
*Remember: the machine only holds about 3.5 gallons of mix at a time.*
13. If you have any questions, please call 610-268-2825.
